

10 MINUTE CONCRETE MENDER

2 part Fast Setting Urethane Polymer

10 Minute Concrete Mender is a high-penetrating urethane that simply mixes with sand to form a tough instant polymer concrete. This nearly water thin formula is designed to penetrate the existing concrete substrate for an extremely high-durable bond. Also, this formula is designed to reach concrete strengths rapidly and not get too hard and brittle thus creating permanent repairs.

Compressive Strength (with sand)	4500 psi	<p>10 Minute Cure at 70 degrees F (approx.)</p> <p>Cures Fast in sub-zero environments Safe - Low odor - meets USDA guidelines Chemical Resistant Self Leveling - Easy to Trowel Minimizes Downtime</p>
Elongation	6 %	
Bond Strength	1100 psi	
Tensile Strength	4475 psi	
Viscosity (at application)	16 cps	
Hardness	72 D	
Solids	98 %	
V.O.C. (Mixed)	5.5 g/l	
Mixing Color	Black	
Cure Color	Gray	

Cartridges

Easy to use. Great for hairline to 2" cracks

Approximate Coverage per cartridge:
100 liner feet 1/4" x 1/4" with aggregate
Reusable Cartridge

12 cartridges per case

4 unit Cartridge Kit
Includes application aggregate
Cartridge gun available with kit or separately

Mixing Kits

Easy to mix

Proportions pre-set
Great for spalled concrete, larger cracks or deep repairs

Approximate Coverage per kit
1.5 gallons with aggregate

Kit includes
2 pints part AA@ & 2 pints part AB@
Mixing pail
Application aggregate
